CODE →1

The screenshot shows a web browser window titled 'Simple Addition' with the URL 'http://127.0.0.1:3000'. The browser displays a form with two input fields labeled 'Enter first number' and 'Enter second number', an 'Add' button, and a result display showing '12 + 12 = 24'. The background shows a code editor with the following HTML and JavaScript code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Simple Addition</title>
5 </head>
6 <body>
7   <h2>Simple Addition</h2>
8   <input type="number" id="num1" placeholder="Enter first number"><br><br>
9   <input type="number" id="num2" placeholder="Enter second number"><br><br>
10
11   <button onclick="addNumbers()">Add</button>
12   <div id="history"></div>
13
14   <script>
15     function addNumbers() {
16       const n1 = parseInt(document.getElementById('num1').value);
17       const n2 = parseInt(document.getElementById('num2').value);
18       const sum = n1 + n2;
19
20       const history = document.getElementById('history');
21
22       history.innerHTML += `${n1} + ${n2} = ${sum} <br>`;
23
24       // Clear inputs for next entry
25       document.getElementById('num1').value = '';
26       document.getElementById('num2').value = '';
27     }
28   </script>
29
30 </body>
31 </html>
32
```

Code →2

## DEFINITION OF BOM (BROWSER OBJECT MODEL)

"The JavaScript Browser Object Model (BOM) is a set of objects provided by the browser that allows JavaScript to interact with the browser environment — such as the browser window, URL, navigation history, screen, and pop-up dialogs.

## JavaScript BOM (Browser Object Model) kya hota hai?

BOM ka matlab hai:

### Browser Object Model

Ye JavaScript ka woh part hai jo aapko **browser ke features** ke saath kaam karne deta hai — jaise ki window, alert box, confirm box, URL, timing functions (setTimeout), aur browser ki history.

## BOM ka use kyun hota hai?

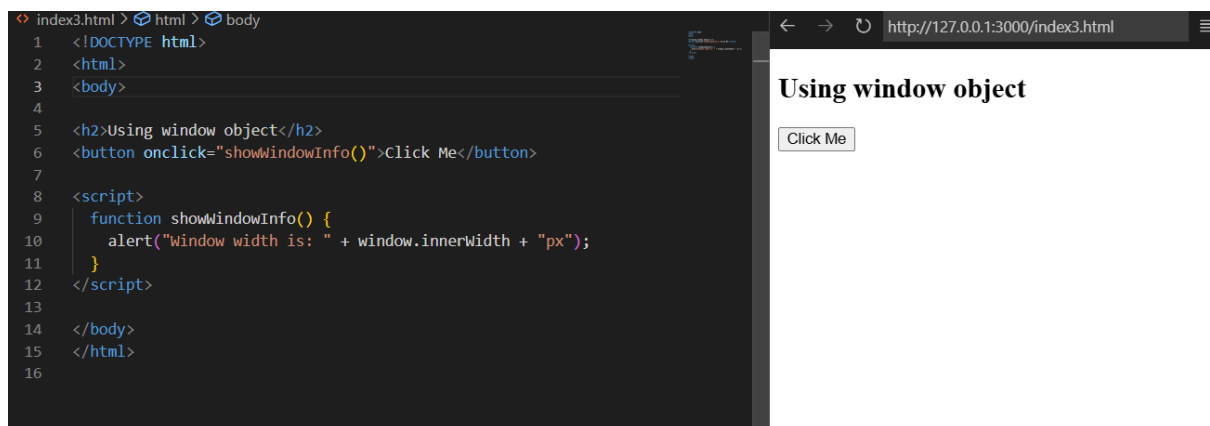

HTML aur DOM ke through hum **web page ke elements** se interact karte hain (like `<h1>`, `<div>`, etc.).

Lekin BOM humein allow karta hai ki hum **browser ke environment** se interact karein.

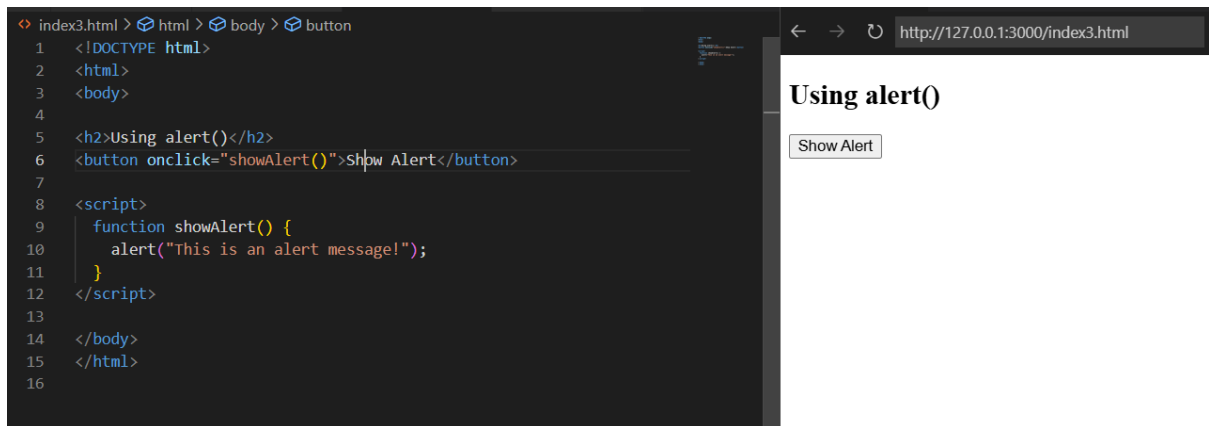

## 📁 KEY BOM OBJECTS AND THEIR USES

| BOM Object                | Description (What it does)                              |
|---------------------------|---------------------------------------------------------|
| <code>window</code>       | The top-level object representing the browser window.   |
| <code>alert()</code>      | Displays a simple pop-up message box.                   |
| <code>confirm()</code>    | Shows a pop-up with OK/Cancel to get user confirmation. |
| <code>prompt()</code>     | Displays a pop-up that asks the user for input.         |
| <code>location</code>     | Lets you get or change the current URL.                 |
| <code>screen</code>       | Provides info about the user's screen resolution.       |
| <code>setTimeout()</code> | Runs a function after a specified delay.                |

- `window.innerWidth` gives the width of the browser window.
- The `window` object is the **global object** in the browser.

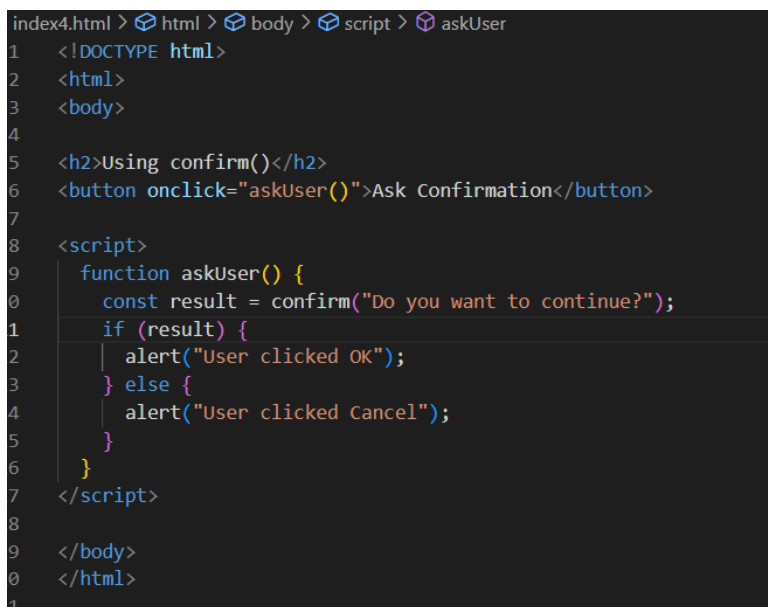

🔔 2. `alert()` – Shows a pop-up message

- `alert()` shows a simple pop-up with only an **OK** button.
  - It pauses the script until the user closes the popup.
- 

### 3. `confirm()` displays a dialog with **OK** and **Cancel** buttons.

- It returns `true` if the user clicks OK, and `false` if Cancel.

## Using confirm()

Ask Confirmation

127.0.0.1:3000 says

Do you want to continue?

OK

Cancel

## Kya hai prompt() ?

prompt() ek JavaScript method hai jo browser me ek **pop-up dialog box** dikhata hai jisme user se **input** liya jata hai.

### English:

prompt() displays a pop-up dialog box that asks the user to input some text.

```
index6.html > html > body > script
C:\Users\abc\Desktop\New folder (9)\index6.html
2 <html>
3 <head>
4   <title>Prompt Example</title>
5 </head>
6 <body>
7
8   <button onclick="askName()">Click Me</button>
9
10  <script>
11    function askName() {
12      let name = prompt("Enter your name:");
13      if (name != 0) {
14        alert("Hello " + name + "!");
15      } else {
16        alert("You cancelled the prompt.");
17      }
18    }
19  </script>
20
21 </body>
22 </html>
23
```
