

CSS transform property ke **kaafi types hote hain**, jo element ko alag-alag tarah se change karte hain — jaise size badalna, ghumana, move karna, ya tilt karna.

Type	Kya karta hai?	Example
<code>scale()</code>	Size ko badhata ya chhota karta hai	<code>transform: scale(1.2);</code>
<code>translate()</code>	Element ko move karta hai (left, right, up, down)	<code>transform: translate(50px, 20px);</code>
<code>rotate()</code>	Element ko ghumata hai degree me	<code>transform: rotate(45deg);</code>
<code>skew()</code>	Element ko tilt karta hai	<code>transform: skew(20deg, 10deg);</code>
<code>matrix()</code>	Complex transform (scale, rotate, skew, translate ek saath)	<code>transform: matrix(1, 0, 0, 1, 50, 50);</code>

1. Scale() →

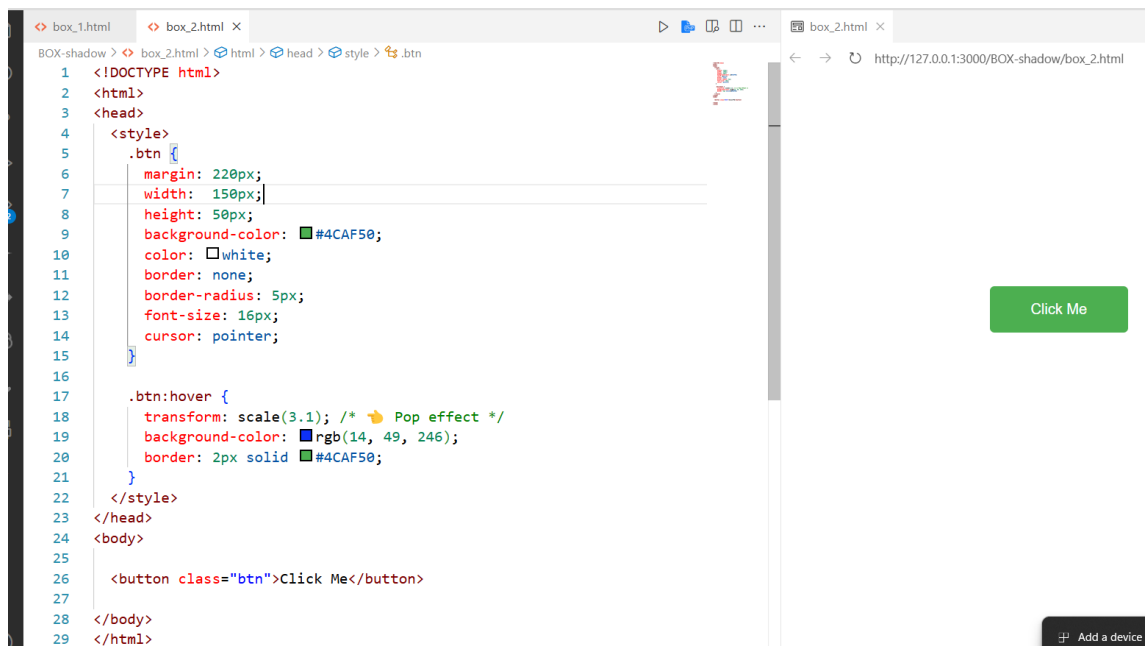

`transform: scale()` — Easy Breakdown

 Size ke hisaab se samjho:

- ✓ `scale(1.0)` → 📏 **Normal size** (100%)
📏 Box jaisa hai, waisa hi dikhega
- 🔍 `scale(1.2)` → 📏 **Bada size** (120%)
📏 Box **20% bada** ho jayega
Jaise zoom kar diya ho
- ▼ `scale(0.8)` → ▼ **Chhota size** (80%)
📏 Box **20% chhota** ho jayega
Jaise shrink ho gaya ho

Situation	Use <code>scale()</code> like
Button hover	<code>scale(1.1)</code> for pop effect ✨
Image enlarge	<code>scale(1.2)</code> on hover 🖼️
Shrink on click	<code>scale(0.9)</code> for press feel 🖱️

translate() Element ko move karta hai (left, right, up, down)

`transform: translate(50px, 20px);`

Breakdown:

- `translate(50px, 20px)`
 - 50px right, ↓ 20px down
- `translate(-50px, -20px)`
 - ← 50px left, ↑ 20px up

BOX-shadow > <> box_2.html > html > head > style > .btn: hover

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4 <style>
5   .btn {
6     margin: 220px;
7     width: 150px;
8     height: 50px;
9     background-color: #4CAF50;
10    color: white;
11    border: none;
12    border-radius: 5px;
13    font-size: 16px;
14    cursor: pointer;
15  }
16
17  .btn: hover {
18    transform: translate(-50px, -20px); /* Pop effect */
19    background-color: yellow;
20    /* border: 2px solid #4CAF50; */
21  }
22 </style>
23 </head>
24 <body>
25
26   <button class="btn">Click Me</button>
27
28 </body>
29 </html>
```

Click Me

After hover :➡

Property	Kya karta hai
<code>translate(50px, 20px)</code>	50px right, 20px down
<code>translate(-30px, 0)</code>	30px left
<code>translate(0, -40px)</code>	40px up
<code>translateX(100px)</code>	Sirf right
<code>translateY(100px)</code>	Sirf down

Try your Self :

rotate() Element ko ghumata hai degree me `transform: rotate(45deg);`

🔧 Kya karta hai?

🔊 Ye **element ko ghumata (rotate)** hai, **degree** mein — jaise clock ke needle ghoomte hain
🔊

`transform: rotate(angle);`

angle = kitne degree ghumana hai (positive ya negative)

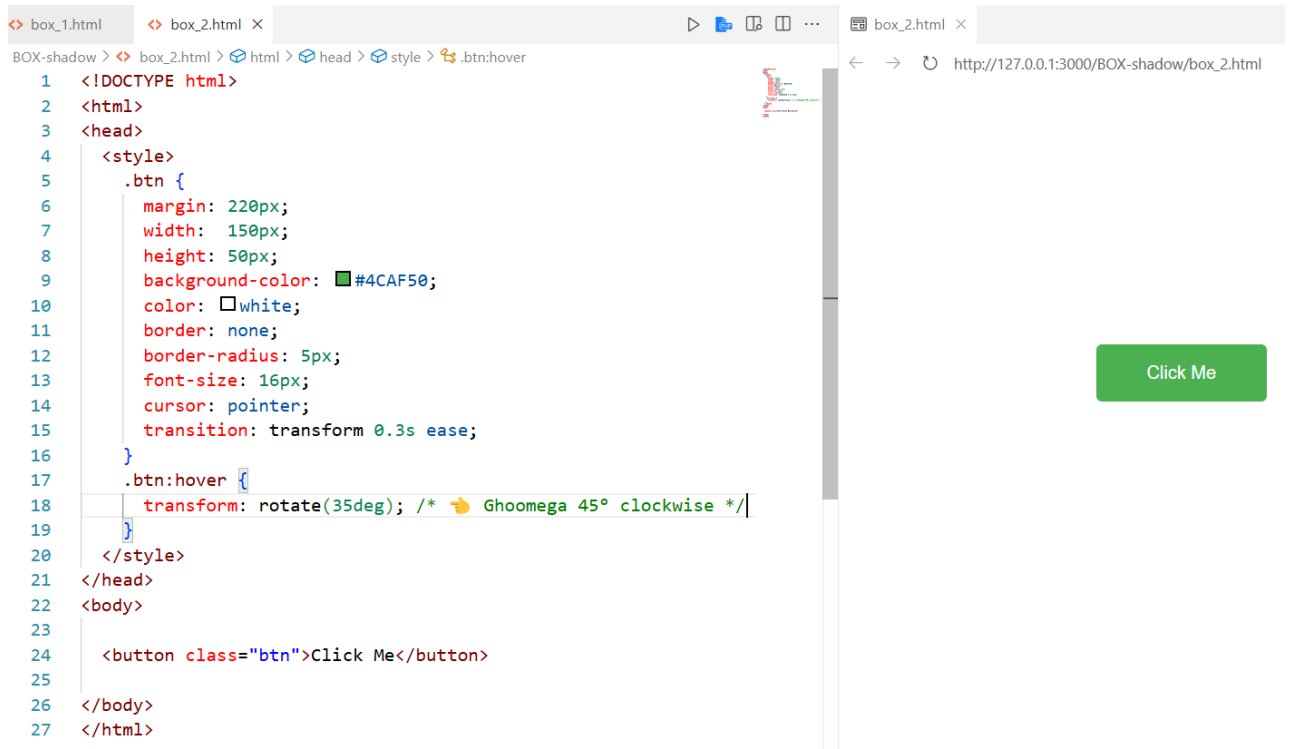

Code	Meaning
<code>rotate(45deg)</code>	↻ 45° clockwise (right side)
<code>rotate(-45deg)</code>	↻ 45° anti-clockwise (left side)

Code

Meaning

rotate(90deg) ↻ Quarter turn (right angle)

rotate(180deg) ↻ Upside down

After hover :

Example 2➡

```
<!DOCTYPE html>
<html>
<head>
  <style>
    .btn {
      margin: 220px;
      width: 150px;
      height: 50px;
      background-color: #4CAF50;
      color: white;
      border: none;
      font-size: 16px;
      cursor: pointer;
      transition: transform 0.3s ease;
    }
    .btn:hover {
      transform: rotate(350deg); /* 🖱️ Ghoomega 350° clockwise */
      background-color: aqua;
      border-radius: 50px;
    }
  </style>
</head>
<body>

  <button class="btn">Click Me</button>

</body>
</html>
```

o/p =

>

skew()

Element ko tilt karta hai

```
transform: skew(20deg, 10deg);
```

transform: skew() — Asaan Samjhaav

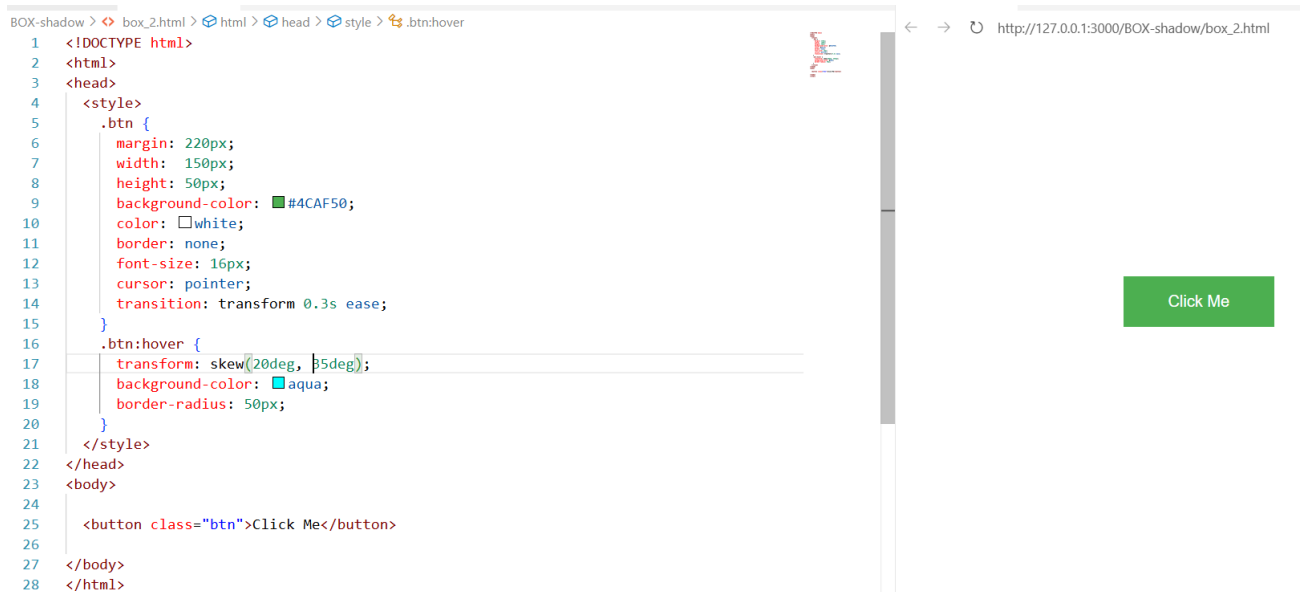

Kya karta hai?

🔗 `skew()` **element ko tilt** karta hai — jaise image ya box **tedha** ho gaya ho ☐
Socho: Jaise kisi box ko pakad ke thoda sa ek taraf kheench diya ho 🌀

transform: skew(X, Y);

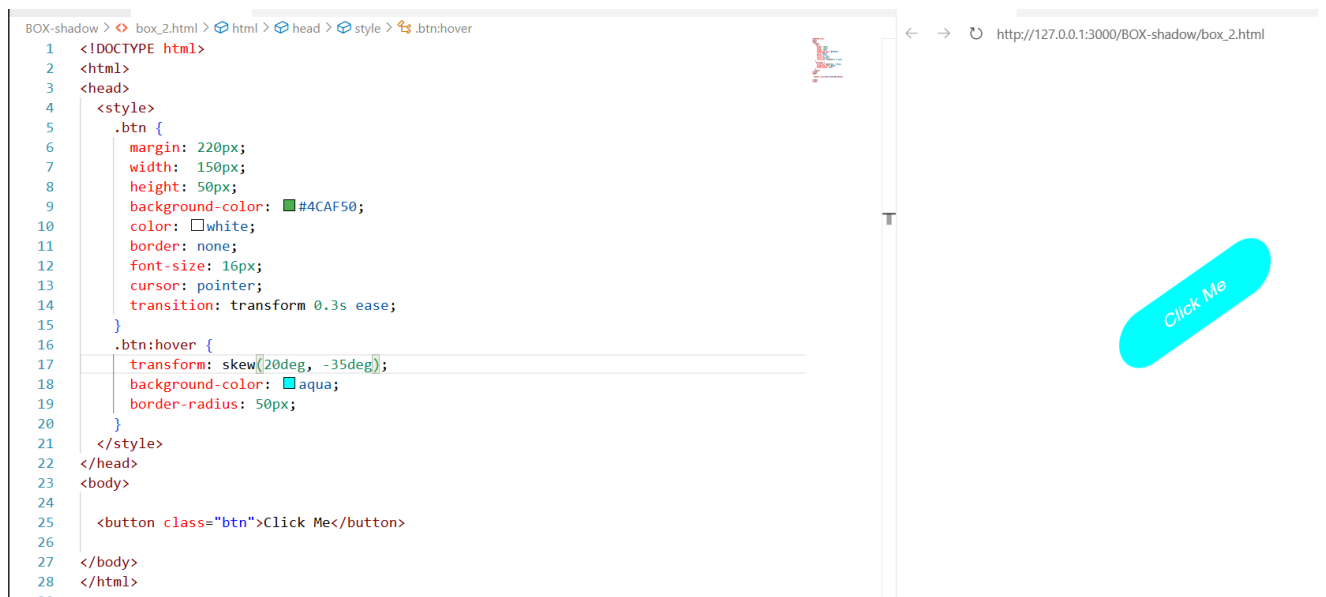

Value	Meaning
X	Horizontal tilt ↔ (left/right)
Y	Vertical tilt ↑ (top/bottom)

o/p ==>

example 2 =>

matrix()

Complex transform (scale, rotate, skew, translate ek saath)

`transform: matrix(1, 0, 0, 1, 50, 50);`

➔ Translate X and Y ➔

🐾 TranslateX() and TranslateY() Notes:

- `translateX(value)` — Element ko **horizontal** direction mein move karta hai
- `translateY(value)` — Element ko **vertical** direction mein move karta hai

transform: translateX(50px); /* Right mein 50 pixels move karega */

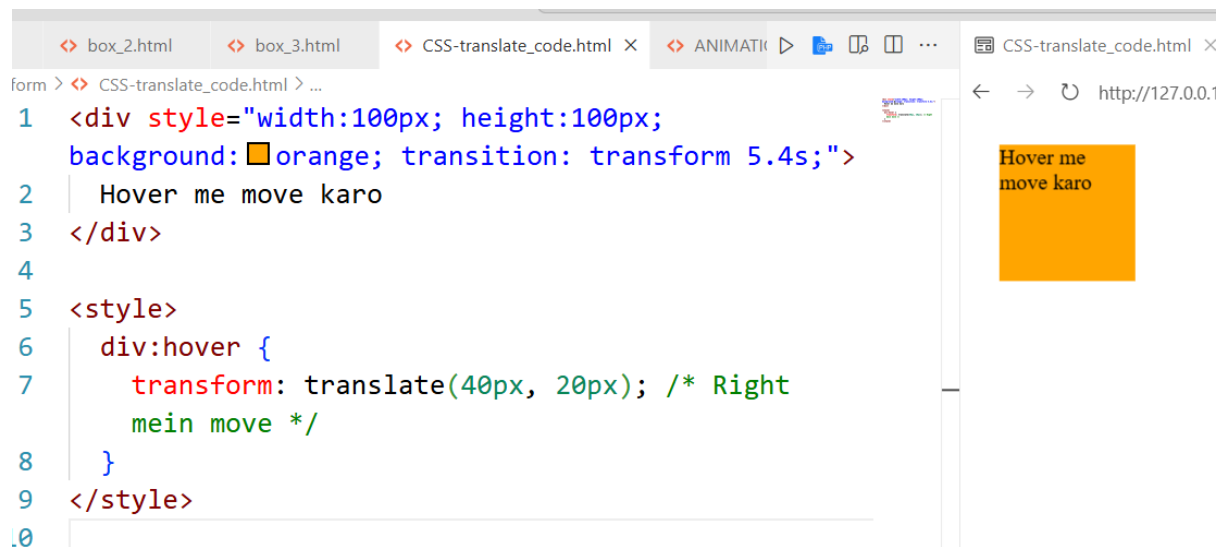

transform: translateX(-30px); /* Left mein 30 pixels move karega */

transform: translateY(20px); /* Neeche 20 pixels move karega */

transform: translateY(-15px); /* Upar 15 pixels move karega */

Simple explanation:

- Positive X → Right
- Negative X → Left
- Positive Y → Down
- Negative Y → Up

Task :

Ek webpage banao jisme 4 boxes vertically stacked ho. Har box par hover karne par ye effects hone chahiye:

- Pehla box right me 40px move ho jaye aur background color aqua ho jaye
- Dusra box left me 30px move ho jaye aur background color blue ho jaye
- Teesra box neeche 20px move ho jaye aur background color yellow ho jaye
- Chautha box upar 15px move ho jaye, border dotted red ho jaye, aur background color turquoise ho jaye
